

Salvatore Matrisciano

Senior Mobile Developer

Senior Mobile Developer with 6+ years of experience in native Android and cross-platform development (Flutter, React Native, Ionic), fully focusing on Flutter and Android in recent years.

Currently at Deloitte in Milano since February 2020, leading an international team of 6 mobile developers on the development of a new native Android app for a prestigious Italian luxury automotive manufacturer (Kotlin, Jetpack Compose). Previously I led an international team on a Flutter-based IoT app for a well-known Italian coffee machine manufacturer, integrating REST API, AWS IoT Core, WebSocket, and MQTT, and contributed to a Flutter web platform for a European police department within a fully international team.

I also worked on cross-platform mobile apps for major European energy providers.

I specialize in mobile app development, with a focus on designing and implementing a solid software architecture, emphasizing design patterns and SOLID principles.

My work also includes technical analysis, code review, code refactoring, and bug fixing, ensuring high-quality, maintainable, and scalable applications.

Started my career with a 3-month internship as an Android Developer at Beeline in London (Feb-May 2017).

Passionate about technology, I've attended several tech events, like Flutter Heroes 2024 and 2025, MWC Barcelona 2024 and Fluttercon Europe + Droidcon Berlin 2025, where I co-hosted a talk.

Work Experience

Deloitte, Milano, Italy

Feb 2020 - Present

Mobile Developer, Tech Lead

- Developing the new native Android app for a prestigious Italian luxury automotive manufacturer (Kotlin, Jetpack Compose), leading an international team of 6 mobile developers (September 2025 - Present)
- Developing the new Flutter website for a European police department in a complete international team of 10 Flutter developers, from Belgium, Germany, Switzerland, Italy, Greece and Romania (April 2025 - August 2025).
- Developing the new iOS and Android cross-platform IoT app in Flutter connected to the new coffee machines of a famous Italian manufacturer, leading an international team of 6 mobile developers. The communication between the mobile app and the coffee machine is done using AWS IoT core, with WebSocket in lan2lan and MQTT via cloud. We also made 2 native modules in Kotlin and Swift: ApplianceKit for machine communication and IdentityKit for users authentication. The 2 modules are used by the app through Flutter plugins we developed (December 2023 - March 2025).
- Implementing improvements and new features to the iOS and Android cross-platform app in React Native for an Italian energy provider (January 2023 - November 2023).
- Implementing improvements and new features to the iOS and Android cross-platform app in Ionic Angular for a European energy provider (July 2020 - December 2022).
- Implementing improvements to the native Android app of a prestigious Italian automotive manufacturer (February 2020 - June 2020).
- Use of Git, GitHub, GitLab, Bitbucket, Fork, Jira, Confluence, Microsoft Planner, Android Studio, Visual Studio Code, Xcode, Jenkins, Figma, Zeplin, Invision, Sketch, Miro, Mural.
- Agile and Scrum methodology.
- REST API integration, IoT, MQTT, WebSocket.
- Releasing app's updates on both Google Play and Apple App Store.
- Estimating new features' and projects' effort.
- Daily direct contact with the clients, support and analysis.
- Bug fixing, code refactoring and teammates' code review.

I am motivated and excited in facing new challenges and tasks, I like working in complex projects with the goal of improving and learning.

I am open to new experiences and I show an excellent ability to adapt, I also think that the success of a project comes from collaboration, professionalism and good relationship among the members of a team.

Personal Projects

Visitup - 2025

Flutter tourist guide app of Bologna. Android, iOS and Web App, Firestore Database, Firebase Authentication.

Musixgame - 2022

Android music quiz game app. The app is written in Kotlin with Jetpack Compose, using Koin and Retrofit2, with a Model View ViewModel Architecture. For the development I used Android Studio, Git, Github, Firebase, Firebase Authentication (Facebook, Google and Email) and Cloud Firestore database.

Keiken - 2019

Android app that connect users by letting them create and book "experiences". Keiken experiences are activities and events created by the users available in the whole world. Use of Java, Android Studio and Firebase.

Remote Control Car - 2018

Remote control Android app for an Arduino and Raspberry Pi car. Use of Java, Android Studio and TCP Socket.

Visitup Bologna - 2017

Android tourist guide app of Bologna. There are an historical tour with audioguides and an aperitivo tour. Use of Java and Android Studio.

Compass - 2016

My first Android app: compass pointing north with the possibility of changing the compass image and the background image, including gallery picture, camera view, or Google map as background. Use of Java and Android Studio.

Skills

- Quickly pick up new technologies and languages with ease.
- Organize the work with a team or autonomously, defining priorities, assuming responsibility, respecting the deadlines and targets set, also in stressful situations.
- Analyze complex data, draw conclusions, produce reports and make recommendations to senior management.
- Review 3rd party developed code and bug fix as required.
- Build effective working relationships.
- Communicate effectively, both orally and in writing.

Visitup Bologna, Bologna, Italy

Jul 2017 - Nov 2017

Android Developer

- Project, design and development of the Android app of Visitup Bologna..

Beeline, London, UK

Feb 2017 - May 2017

Android Developer

- Designing, implementing and documenting improvements to the Beeline Android app, including bug fixing and implementing new social, on-boarding and other features.
- Code review and bug fixing.
- Use of Android Studio, Git, GitHub, Firebase, Trello, RxJava, ButterKnife and Dagger.
- Test with Travis CI.
- Programming in Java and Kotlin.
- Prototyping design with Marvel.
- Design and implementation of a prototype Android and iOS app in React Native.

Smart vs Phone

Sep 2017 - Feb 2018

Columnist

- Writing articles about new technologies and computers.

HwGadget

Sep 2016 - Sep 2017

Columnist

- Writing articles about new technologies and computers.

Education

Alma Mater Studiorum - Università di Bologna, Bologna, Italy

Sep 2014 - Present

Computer Engineering

- Experience in Software engineering, Networking, Database, Operating Systems and Concurrent Programming.
- Experience in Web Applications development.
- Proficiency in Java EE/HTML/CSS/XML/JavaScript/SQL/Hibernate.
- Strong Java/C programming skills.
- Development of Keiken: an Android app that connect users by letting them create and book "experiences", using Java, Android Studio, Firebase and Git in team with other 2 people.

Alma Mater Studiorum - Università di Bologna, Bologna, Italy

Sep 2013 - Jan 2014

Political Economy

- Left for Computer Engineering.

Liceo Scientifico Enrico Fermi, Bologna, Italy

Sep 2008 - Sep 2013

Math and Science High School (with Computer Science)

- Gathered knowledge in a wide spectrum of fields of study, both classical (Italian and English grammar and literature, History, Philosophy, Latin, Art History) and scientific (Maths, Physics, Chemistry, Biology, Technical Design, Computer Science) along with the instruments to carry on learning in the future.
